

Model Browser

This page contains thumbnail images and a brief details of our range of model kits. They are divided into: [Micro](#) which are approx 75gm auw and below; and [Mini](#) which are approx 150gm auw and below. The Micro models are suitable for use with the Spektrum AR6400, ParkZone PKZ3352 Vapor/Ember or similar receiver modules. Many Micro kits use the Parkzone [PKZ3624 motor/gearbox](#) with E-flite [EFL9051](#) prop. Suitable airborne gear for the Mini models comprises a micro 3-4 channel receiver, a 18mm 10gm 2000Kv brushless motor, 6A BL ESC, a 200~350mAh 2S LiPo and 2 or 3 3~4gm servos.

The price shown against each model is for the kit only, some additional parts (e.g. motor, ESC, receiver, servos, covering material) is required to complete the model. The full description on the Micron R/C website for each kit includes a set of suitable optional items. Please contact us if you would like a printed version of this information.

The shipping cost depends on the number and type of kits ordered and this can vary considerably for international orders. If the delivery address is outside the UK, please contact us to get a total price before placing an order via our web site.

Micro Models
